Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-2 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Ditman et al.

Ditman et al. teaches a device and method for detecting an object using optical sensors where a plurality of optical emitting elements (40,42) are arranged parallel to one another and to a face of an object such that light will shine on a light detector (34,38) directly opposite the emitter unless an intervening object blocks the light path. The light sources are alternatively turned on and off (Col. 4 Line 65 through Col. 5 Line 18) by drivers (58). Signal outputs of the detectors are compared by the circuit arrangement of Fig. 9, which determines the presence of a body in the detection assembly (Col. 4 Line 65 through Col. 5 Line 53) by comparing the detected signal strength and composition with predetermined values.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

The following US Patent documents teach multi-sensor optical detection systems:

US Patent 4,822,999 (Parr) and US Patent 5,043,566 (Andoh et al.).
